

Commissioning and Configuration

How do I get the latest firmware to the free@home System Access Point?

There are two ways to install the latest firmware to your System Access Point.

1. In the user interface, go to "Preferences -> Update". Make sure that the box "Automatic download of firmware updates" is ticked. When there is a new firmware available and the System Access Point is connected to the home network, it will automatically recognize the new firmware. In the app you will get a push-message asking if you want to install the new firmware or not.
2. For manual firmware updates, go to the ABB Webpage <http://new.abb.com/low-voltage/products/building-automation/service-and-tools/downloads> or to the Busch-jaeger webpage <http://www.busch-jaeger-catalogue.com/> and download the newest free@home firmware. In the user interface – go to "Preferences -> Update" and click "Transmit firmware to device". Choose the file you just downloaded from the website.
