

# DALI

## **Can a Light Sensor LF/U 2.1 be assigned to multiple DALI groups in a DALI Light Controller?**

A Light Sensor can always be assigned to only one DALI group.

This sensor acts as control value directly on the control circuit of the assigned DALI group. The control value of a controller group can, in turn, act on another DALI group within or outside the DALI Light Controller via a master/slave.
