

# DALI

## How many and what types of DALI participants can be connected to one DALI-Gateway Basic DG/S x.64.1.1 output?

The DALI-Gateways differ in the number of DALI outputs.

DG/S 1.64.1.1 = 1 DALI output

DG/S 2.64.1.1 = 2 DALI outputs

These are equivalent and have the same technical features and functions.

Up to 64 DALI devices (according EN 62386) can be connected to each DALI output. Both "normal" lamps (DALI Type 0) and single battery emergency lights (DALI Type 1) may be connected to the DALI output.

Unique solution ID: #1386
