

DALI

What are the requirements for the use and parameterization of the emergency lighting functions of DGN/S1.16.1?

With the DGN/S1.16.1 it is also possible to control devices with emergency converters.

Below document describes the most important test functions and the related communication objects. General notes on emergency lighting control are also listed in the document.

The document is intended to help the programmer to use the test and status objects correctly.

Additional important content like code tables or information about the communication objects are listed in the product manual.
