

Visualisation, Display and Signalling

Why I cannot see any values for a control element to set for e.g. a “switch” in my visualisation?

- a) Check if you have added the missing group address to your “visualisation structure”
- b) Check if the group address has the right data type
- c) Check if the project itself is selected for the ControlTouch (ControlTouch configuration page -> “Devices” -> Drop-down box “Project in device”)
