

Movement and Presence Detection

How do I connect my smart device (smartphone, tablet) to the Busch-Watchdog PRO KNX?

There are several ways to connect your smart device to the Busch-Watchdog PRO KNX:

1. Initial Connection: You can only connect to the device for the first time within the first 30 minutes after powering it on.

2. Using the SmartConnect app:

- Within these 30 minutes, open the SmartConnect app and define your home/project.
- The app will automatically find Bluetooth devices within the installation.
- Select a device to automatically add it to your project.

3. Add Manually:

- If the app does not find your device automatically, you can add it manually.
- Press the down arrow button in the app, then the plus icon, and choose "scan code" to scan the code on the back of the device.
- You can also use the plus icon to add another device to your project.

4. Accessing a Device Already Connected to Another User:

- If the device is already connected to another user, you can only gain access by scanning a QR code generated by the other user's app.
- The other user should go to Installation settings > Service > Transfer to another App to generate the QR code.
- Scan the QR code by pressing the down arrow button in the app, then the plus icon, and choosing "scan code".
