Commissioning and Configuration

free@home: How can actions be created and configured?

There are 4 key steps to create and configure Actions in free@home:

- Precondition: it works like an AND-link
- Event: it works like an OR-link
- Action: List containing all actions to be taken
- Notification: it is sent as soon as an event has occurred. A notification can be sent as E-Mail, Push notification or Pop-up in panel

This video shows how actions can be created and configured:
