

Commissioning and Configuration

Why can't I connect a movement detector directly to a scene in free@home?

In the user interface "Link", it is not possible to connect a movement detector directly to a scene since it is seldom that a user would like to initiate a scene every time the movement detector is activated. However, under "Actions" it is possible to activate a scene with a movement detector and also add logic such as preconditions. E.g. during night, when the movement detector is triggered, activate the "night" scene.

For more information about the Actions in free@home please check our Engineering Guide: [Actions in free@home General information](#)
