

Commissioning and Configuration

Why doesn't my action in free@home work?

For an action to work, it is important to use the "Event" and "Action" columns. An event triggers an action. "Preconditions" and "Notification" columns are optional. Precondition works as a gateway to the event. The event cannot happen before the precondition is met. Without the precondition, the event will initiate an action every time it occurs.

A notification can be sent if the free@home system is connected to a myABB-LivingSpace account. A message can then be sent to an email account, as a push message to a smart phone or to the free@home Touch panel.

For more information about the Actions in free@home please check out Engineering Guide [Actions in free@home General information](#)
