HCC/S 2.x.x.1: How is the duration of the valve purge calculated?

During the purge the valve gets completely opened and closed, so the double time is used for the total duration according to the deposited times in the parameters.

General	Valve output	<input checked="" type="radio"/> Activated <input type="radio"/> Deactivated
+ Manual operation	Voltage range valve control value	0 - 10 V
- Channel A	Valve drive opening/closing time	180 s

General	Valve output	Motor-driven (3-point)
- Channel A	Output B is used for the 'Open' signal, output C for the 'Close' signal	
	Reversing time	500 ms
Application parameters	Switch on time for valve drive from 0 to 100%	120 s
