

# Heating, Ventilation and Air Conditioning

## AC/S 1.x.1: What needs to be considered if "Room involvement" is activated during commissioning ?

In the default parameter, the calculation of the control value starts with a delay of 45 minutes. For commissioning, it is advisable to choose the delay much less.

Room involvement	<input checked="" type="checkbox"/>	The control value of all valves of this heating distribution circuit must be connected to the ASM input socket!	
Increase supply temperature		10	↕ K
Decrease supply temperature		-10	↕ K
Optimum room control value		70	↕ %
Controller proportional factor Xp		30	↕ %
Room involvement calculation delay		00:45:00	↕
