How do I create a presence simulation in free@home?

In the user interface go to "Time Control". Press "Add" and select the option "Create a presence simulation". You can choose to use the presence simulation function or copy from another time profile.

The presence simulation automatically records all switching of your actuators in a weekly profile. With the presence simulation, you can choose to update time profiles from functions, function groups and scenes.

Click on the desired function/group/scene and choose "Update time profile". The system will automatically reflect in the time line how you have used this during the past 7 days. It is also possible to manually adjust the time settings by positioning or repositioning the function/group/scene on the timeline.

When you are done, let the presence simulation option be highlighted on the bar to keep it activated and exit to main menu.
