

# System, Infrastructure and Interfacing

## What is "ABB Terminal" and how to use it?

The ABB Terminal is an online configuration tool part of [myABB Living Space®](#) Platform for easy planning of:

- - KNX projects
- - free@home projects
- - Electric standard installation projects

After having completed the project planning of all rooms and sections of the building, the electrical specialist will have an overview, among others, of the planning of the building installation, all integrated components and list and costs of devices and components.
