

System, Infrastructure and Interfacing

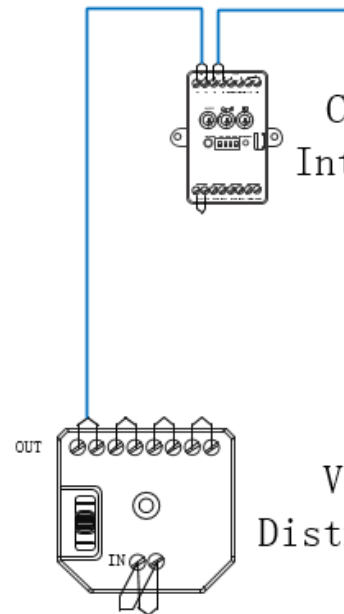

How can I connect the ABB-Welcome (M) Camera interface?

ABB-Welcome (M) Camera Interface (CI) is a video source device. It captures video from outside, similar to the video outdoor station.

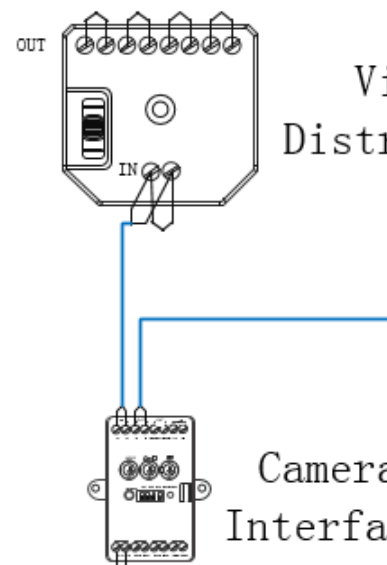

The Camera Interface can be connected to a video distributor or to a Gateway.

Below there is a description of the different connection options using both devices:

Connected to the video distributor 'out' port: only the connected branch of the video distributor will receive the video.

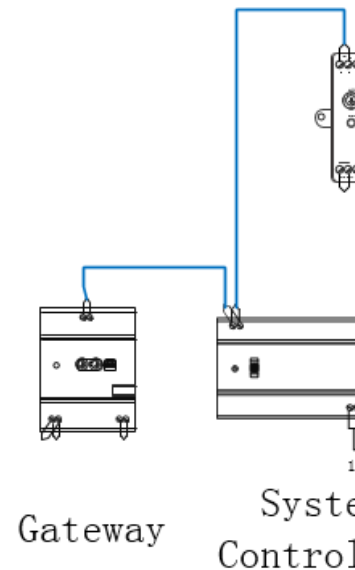

Connected to the video distributor 'in' port: all the branches of the video distributor will receive the video.

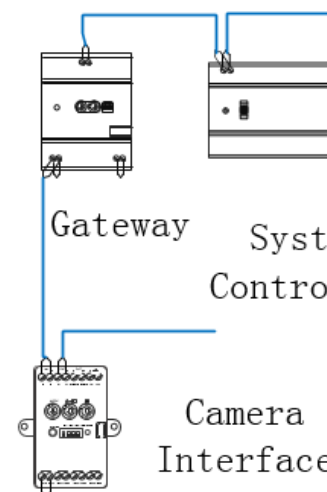

System, Infrastructure and Interfacing

Connected to the Gateway 'out' port: only the connected gateway system will receive the video.

Connected to the Gateway 'in' port: it can also send the video to other gateway system.
