

Visualisation, Display and Signalling

DBS/S 1.1.1.x: Why do I get the error message “Internal Server Error” after I have updated the Dashboard Server, even the web interface is still accessible?

After a few updates to the box, it may be necessary to physically reset the box. To do this, press the reset button on the device for 4 seconds. After that, you have to upload again, but the device and network settings are retained.
